plinary unification Research on interdisciplinary unification. Home: 5th and Broadway Markethouse 610 Saint Paul MN 55101 1314 Williams Ave Natichocles LA 71457 Office: 6950 Washington Ave S Eden Prairie MN 55344 I was fortunate enough in my youth to experience and learn what has been the most important idea and principle in my life, the natural law of enrichment through diversity. This concept means that change and growth come about more by combining differences than by adding likenesses. As in the biological world, where such behavior produces the vitality of hybrids, and as in chemistry, where the co-valent bonds of carbon make life possible, in human life we can also benefit immeasurably from using our differences as a creative way to grow new. Thus, we can evolve beyond polarizations such as nationalism, racism, sexism, institutionalism and other obstacles that separate us and stunt our ability to realize the full community of Man.

Both watch carefully a natural object such as the aurora, a glacier, migrating birds, the Arctic Ocean, etc., and abstract whatever they feel the most essential part from the object. Then, an artist paints his abstraction on a canvas, while a scientist puts his abstraction into the form of equations.
