

LARRY WILLIAMS BIOGRAPHICAL DATA

Larry R. Williams

Born: October 6, 1942, Miles City, Montana Age: 35 years
Hometown: Billings
Parents: R. S. Williams
Sylva Brurs Williams
Education: Billings Senior High School, 1960
University of Oregon, 1964
(BS, Journalism)
Wife: Carla Swenson Williams, born in Bozeman
Home Address: 191 Somerset Drive, Kalispell, Montana 59901

OCCUPATIONAL-PROFESSIONAL ACCOMPLISHMENTS

Private businessperson from 1967 to date
Publisher of Professional Timing Service, an investment advisory letter
Founder of Commodity Timing, a commodity advisory service
Previously owned Alice's Restaurant, Missoula, Montana
World famous lecturer, including the London Financial Times
Commodity Conference, Beirut Commodity Seminars, etc.

PUBLICATIONS

Books: The Secret of Selecting Stocks
How I made \$1,000,000 Trading Commodities, Last Year
How Seasonal Factors Influence Commodity Prices
Articles: Numerous, in commodity publications and stocks and commodity market books.

WHY IS LARRY WILLIAMS RUNNING?

Larry has been frustrated, upset and angered over what has been happening in this country.

With commodity prices so low the average farmer can't make a living off his own land, the cost of money so high few can afford to borrow, most of us are, like Larry, angered and frustrated.

But Larry is tired of getting mad. This time he wants to get involved in helping to turn this great country around.

It is his opinion that we can get the country moving forward again, that we can all realize our visions of freedom from excessive government regulations, inflation and taxation.

As Larry sees it, government has been part of the problem, not part of the solution and he wants to be part of changing that.

When government tries to solve problems with money, not ideas and talent, while at the same time passing hundreds of new laws that restrict our freedom it is time for him to make a major commitment.

Larry is not running because he needs a job or wants a life of politics...he is running because he is concerned and committed to seeing things get better.

Some say PICKUP

Some say that to run for public office you must have the "right" qualifications such as being a lawyer, a member of the state legislature and belong to all the right clubs in town.

Larry's position is that the very best qualifications are those that show an individual has excelled at his calling, whether that is digging ditches, driving truck or working in a mill. The "right" qualifications in his way of thinking should be proof that one has met with success in his calling...has had experience in meeting payrolls...even when it was "impossible"; and strong evidence of making what doesn't work, work.

THE BATTLE IS WITH THE BUREAUCRATS

Government has given us problems not solutions as exemplified by the following randomly selected examples:

1. The F-15 Fighter Program that was to cost \$6 Billion ended up costing \$12 Billion
2. Over 25% of government installations that discharge into the waterways, are in violation of environmental protection laws.
3. Congressmen recently voted a \$3.5 million increase in what they may spend on their home district office spaces...a true raid on taxpayers pockets.
4. Recently over \$300,000 was spent taking foreign military officers on a tour of the U.S. that included Broadway tickets, trips to Las Vegas and Disneyland!
5. In the last fifteen years, federal employees have had seventeen pay raises and earn on the average \$5,000 a year more than their civilian counterparts.
6. Can you name any government agency that has declined in size during the last six years? (To Larry's best knowledge there is only one, NASA).
7. The Social Security Administration told 300 agency employees in Baltimore that the new regulation about withholdings "finally removes any feeling that we can adequately explain how you calculate benefits".!!!
8. Recently over \$60,000 tax revenues were spent to find out why people who live in Philadelphia talk differently than the rest of the country!
9. The food stamp swindle is a multi-million dollar rip-off of the taxpayer that continues going on, according to government studies.
10. Rutgerd University released a study showing that government red tape adds 25% to the cost of a house.

Considering that our government has given us the Post Office mess, Amtrack and the Swine Flu Vaccine, Larry says it is time to ask not what we can do for our country, but what government has done to us. The answer is as amusing as frightening. Larry has battled the bureaucrats and will do it for you with the intensity of a tiger. He hates bureaucrats and is not afraid to represent your rights to them.

HOW LARRY WILLIAMS WILL STOP INFLATION---NOW

It takes more than WIN buttons to stop inflation, according to Larry Williams.

It is his studied opinion that inflation is the result of two factors: the first is excessive government spending and deficit financing. The second is printing press money from the Federal Reserve System.

Last year the rate of inflation was almost identical with the rate of the increase of money supply by the Federal Reserve System! In one reporting period last year money supply was increased at a 19% annualized rate. It is this type of printing press madness that has caused rampant inflation and the eventual destruction of so many other great countries, as any basic history book shows.

Secondly, due to excessive---yes, crazy---government expenditures and failure to operate on a balanced budget the fires of inflation are fed and the flames reach higher.

As a U.S. Senator, Larry would have a total dedication to reducing the government throw away programs, would do everything in his power to stop the bureaucracy from killing us with their wild-eyed monetary ideas that have proven not to work. The proof is seen everyday as prices are raised.

Fortunately, both problems; printing press money from the Fed and deficit financing of an unbalanced budget can be conquered through the legislative process. But, it does take electing men who are committed to solving the problem, not getting re-elected.

INDUSTRY AND THE ENVIRONMENT

As a backpacker, hunter and fisherman Larry has gotten to know the environment on its terms, not through nature walks with environmentalists.

"My first love in Montana is the environment and my first political thoughts are to the preservation of that environment" said Larry. But, he goes beyond wanting just a pristine environment, he also wants jobs from the environment.

He feels it is possible to have both a beautiful environment and jobs based on a strict but economically sound program of environmental reclamation.

Considering that currently enough wood for 400,000 homes rots on the floors of our forests each year---primarily due to governmental regulations---Larry will seek for more positive government involvement, positive for both jobs and the land.

At present time most of our timber leaves the state for processing at other terminals. He believes we should seek more wood processors right here in Montana to solve our unemployment problems, especially considering the many possible non-polluting forms of industry that we could have. Such as, cabinetry, furniture, or packing crates, all based on creating the finished product here.

HOW TO SOLVE "THE AGRICULTURE CRISIS"

Commodities have been Larry's business for many years. Here is how he feels we can solve the current slump in commodity prices without the burdensome taxes and regulation that parity will bring about.

1. Farmers and ranchers should receive immediate financial assistance to get them through the current price slump.
2. Our Agriculture Department must realize the reason prices are slow is due to the supply demand equation and nothing else. The problem will not go away unless we increase demand through enlarging foreign markets and product uses while at the same time providing farmers with better data on crop size and crop usage so they can keep the supply part of the equation down to profitable levels.

If we instigate full parity at this time, each citizen would have to pay some \$600 to \$700 extra in taxes to fund the program. Larry knows farmers are the last people in the world who want to raise taxes and they don't want increased government regulations or process controls. His ideas on solving the crisis will end the problem and get the agriculture industry profitable and on the move in Montana again.
